A Smarter Way of Home Security

Discover how Akuvox's all-in-one smart security solution maximizes home security, safety, and comfort.

Introduction

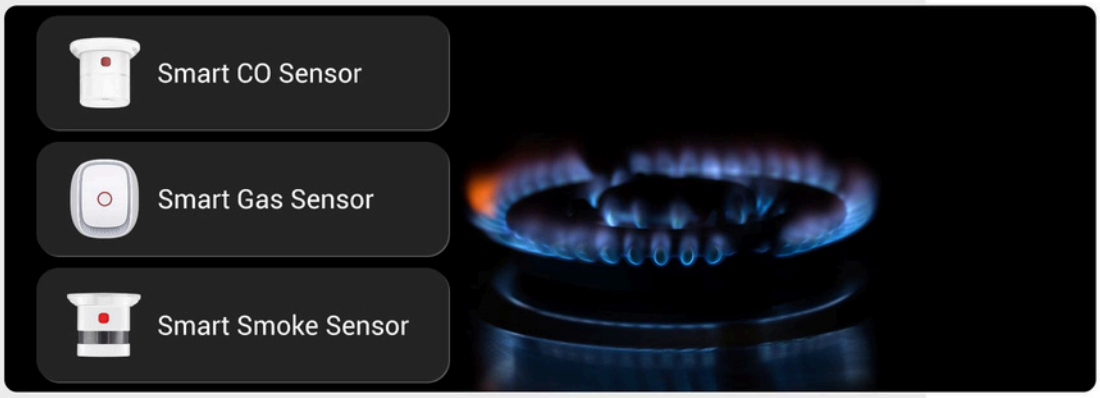
Home is supposed to be a haven. Being able to sleep soundly without worrying about potential hazards should be the norm. Innovative security technologies make it easy for homeowners. Akuvox's Zigbee-powered home security solution gives residents peace of mind and beyond by streamlining home security, home control, intercom systems, and more under one single system.

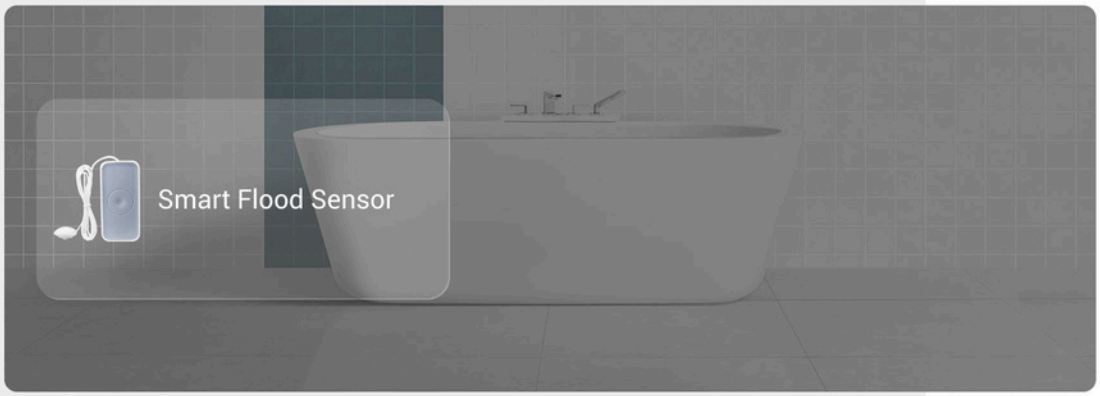
How It Works

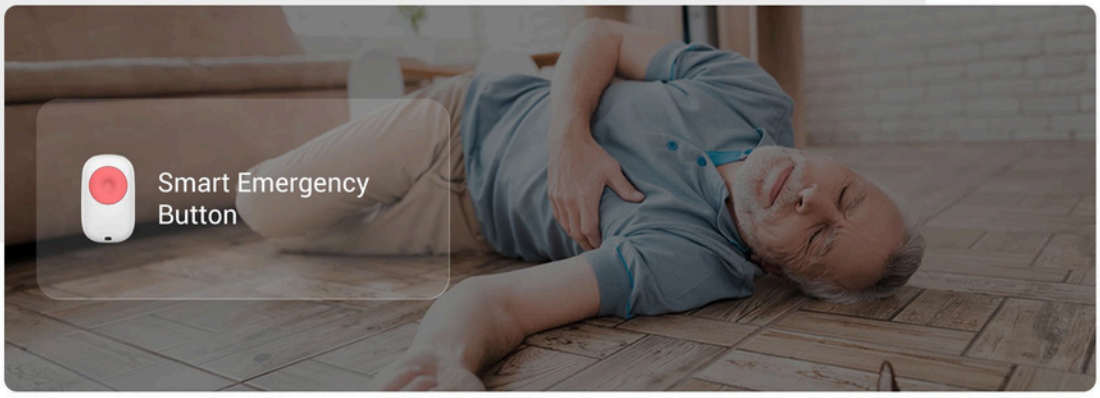
The solution consists of an Akuvox SmartPanel, various smart sensors, and a mobile app. The sensors are connected to the panel via Zigbee and can be controlled by the panel and the app. The latter two can also work with a door phone.

Total Home Security and Safety

The battery-powered Zigbee sensors covering almost all possible life incidents, such as burglary, water leak, and fire, allow homeowners to create home security systems of various scales based on their needs and budgets.

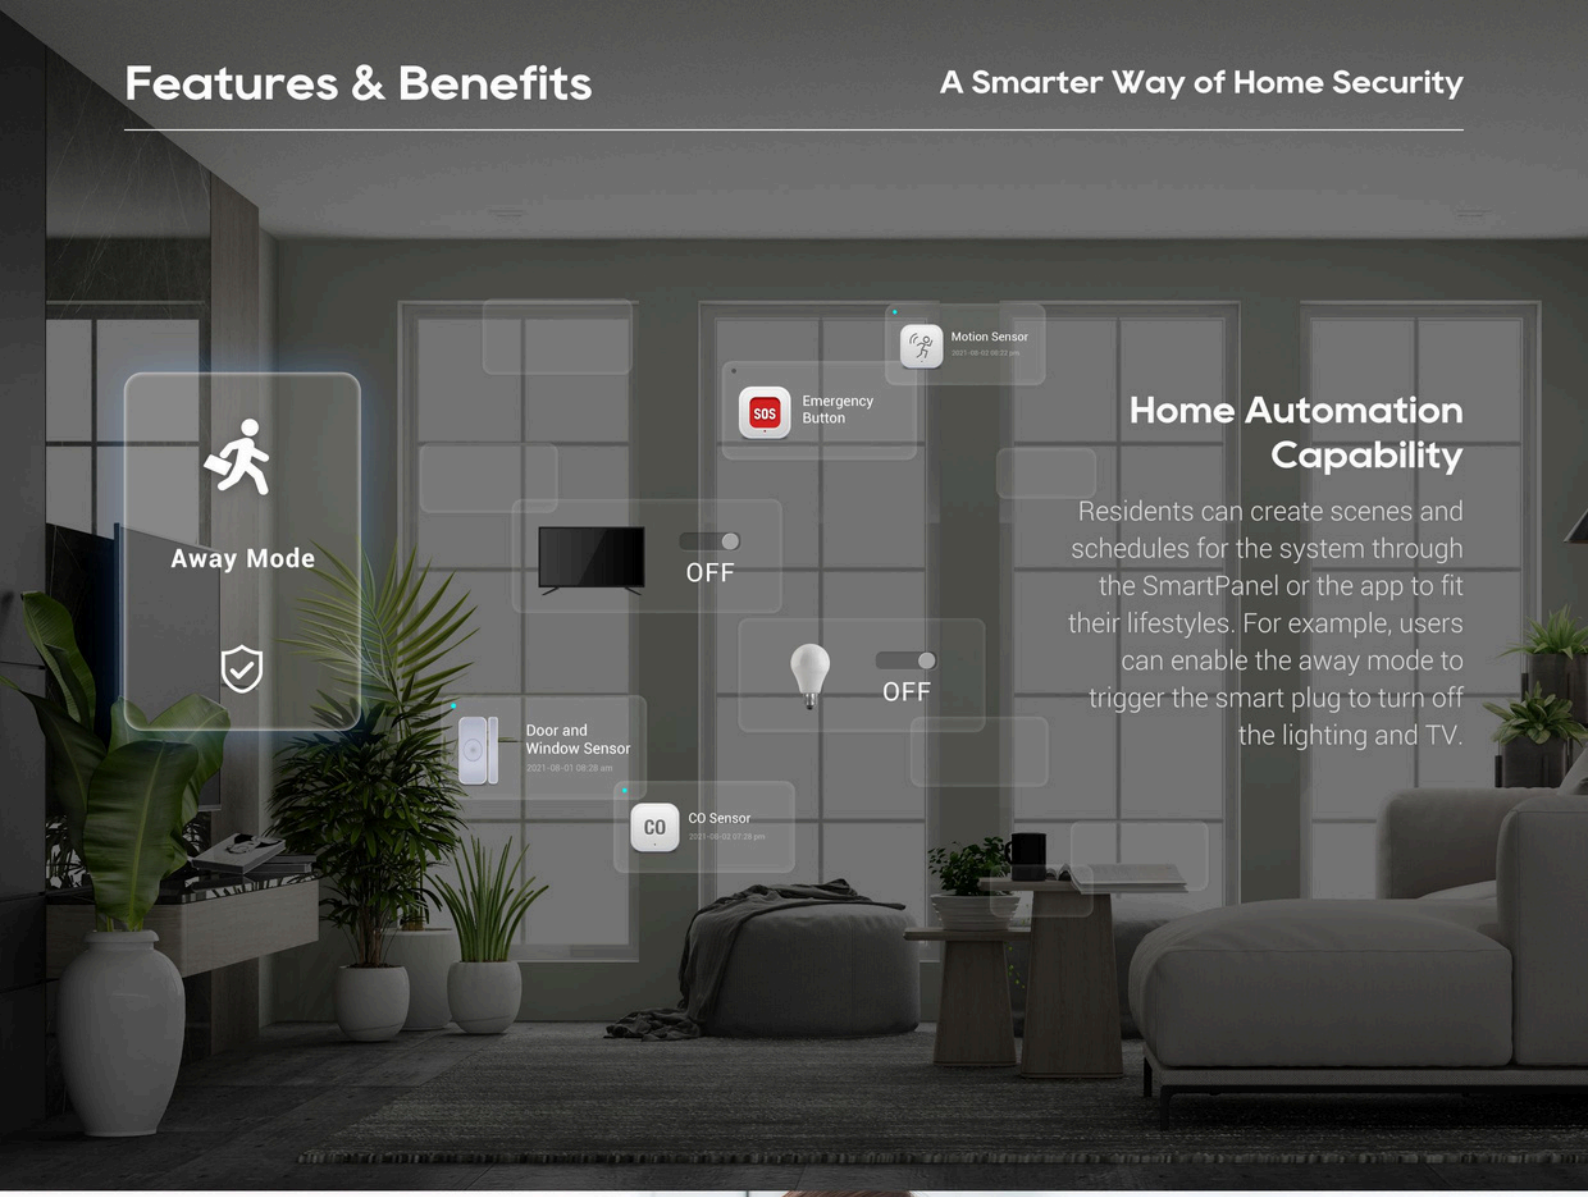






Features & Benefits

A Smarter Way of Home Security

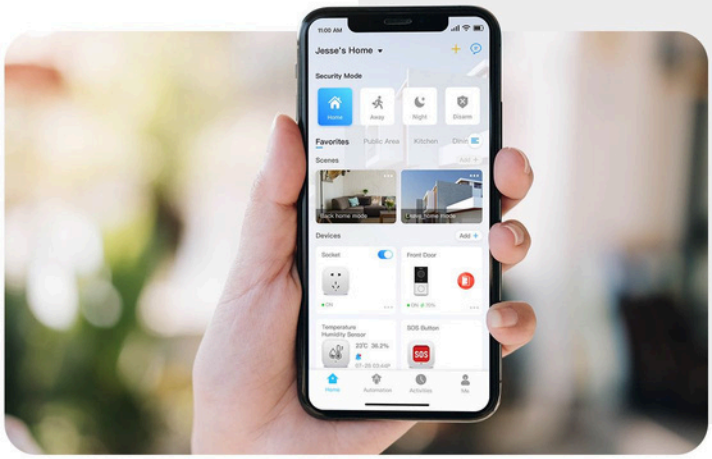


Home Automation Capability

Residents can create scenes and schedules for the system through the SmartPanel or the app to fit their lifestyles. For example, users can enable the away mode to trigger the smart plug to turn off the lighting and TV.

Smart Intercom Integration

Say goodbye to walls cluttered with intercom units and alarm panels. The SmartPanel is also an intercom. Crisp audio and video calls with visitors, room-to-room communication between families, and remote door unlocking are available with it.



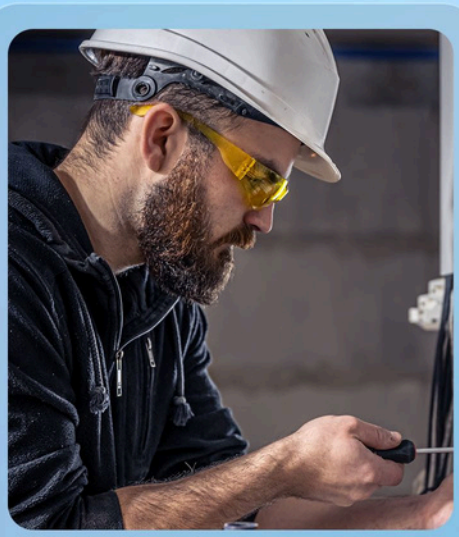
Specially-designed Security App

Keep track of your home anywhere, thanks to the intuitive AK Home app. Alert handling, scene customization, home control, and smart intercom features like seeing and talking to visitors and door opening are all within easy reach.

Hassle-free Installation

The solution supports wireless connection, making it super installer-friendly. The SmartPanel supports Wi-Fi and Zigbee and the sensors, Zigbee.This is particularly convenient with projects with outdated wiring. In addition, a wizard interface facilitates the installation process.

zigbee WIFI



Open System

The high openness makes it possible to expand the system's functionality. Zigbee for adding more smart devices, ONVIF for easy integration with VMS systems, Android OS for installing 3rd-party apps like Google Play Music, and SDK/API to connect with external systems.
